

Smart Store Onboarding

Technical Field Guide for Database & Catalog Configuration

This document provides a comprehensive breakdown of all data fields (columns) required to successfully launch a store, populate it with categorized products, and manage variants.

1. Store Entity Setup

The foundation of the platform. A store must be fully configured and approved to be "Buyable".

Store Columns (stores table)

Column Name	Type	Description	Required
name	String	Store display name (EN & AR)	Yes
tax_number	String	Official Business Tax ID	Yes
commercial_register_number	String	Business CR Number	Yes
commercial_register_date	Date	Date of CR issuance	Yes

commercial_register_image	File/Path	Image of the CR document	Yes
owner_national_id_image	File/Path	Image of Owner's ID	Yes
city_id	Integer	ID of the city (from cities table)	Yes
location	String	Physical address or GPS coordinates	Yes
store_type_id	Integer	Type of store (Retail, Wholesale, etc.)	Yes
status	Enum	1=Pending, 2=Active, 3=Rejected	Yes

2. Product Category Hierarchy

Organize items for customer discovery.

Category Columns (categories table)

Column Name	Type	Description	Required
name	String	Category display name (EN/AR)	Yes
image	File/Path	Visual icon for the category	Yes
parent_id	Integer	ID of parent category (for sub-cats)	No
store_id	Integer	ID of store owning this category	No
is_active	Boolean	Visibility toggle (True = Visible)	Yes

3. Product Catalog

The core items available for purchase.

Product Columns (products table)

Column Name	Type	Description	Required
name	String	Product name (EN/AR)	Yes
code	String	Unique SKU or Barcode	Yes
category_id	Integer	Associated category ID	Yes
brand_id	Integer	Associated brand ID	Yes
price	Decimal	Base price of the product	Yes
qty	Decimal	Global quantity in stock	Yes
image	File/Path	Primary product image	Yes
type	Enum	'standard' or 'package'	Yes
is_variant	Boolean	True if product has variants	Yes
is_active	Boolean	Must be True for customers to buy	Yes

4. Product Variants (Variance)

Detailed options like Size, Color, or Material.

Variant Mapping Columns (product_variants table)

Column Name	Type	Description	Required
product_id	Integer	ID of the parent product	Yes
variant_id	Integer	ID of the variant attribute (e.g., Size)	Yes
item_code	String	Unique SKU for this specific variant	Yes
additional_price	Decimal	Surcharge added to base price	No
qty	Decimal	Stock specific to this variant	Yes

5. Supplier-Specific Catalog (Wholesale)

If you are onboarding a Supplier, use these fields.

Supplier Product Columns (supplier_products table)

Column Name	Type	Description	Required
name	String	Supplier product name	Yes
amount	Decimal	Wholesale volume/amount	Yes
price_per_unit	Decimal	Unit price for wholesale	Yes
unit	String	Unit type (e.g., "Box", "Kg")	Yes
supplier_id	Integer	ID of the supplier user	Yes
supplier_category_id	Integer	Category for supplier products	Yes

Final Purchase Readiness Checklist:

- Store **status** is set to **Active (2)**.
- Category **is_active** is **True**.
- Product **is_active** is **True**.
- **price** is greater than **0**.
- **qty** is greater than **0** (or BranchProduct has quantity).
